COLECTION

Sanitana

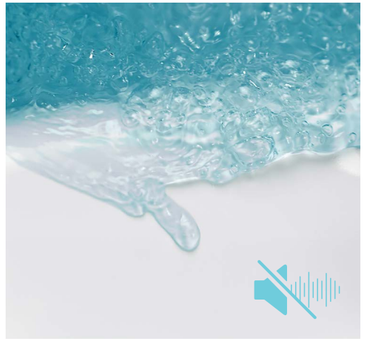
THE SILENCE YOU CAN FEEL

Imagine a flush that combines power, cleanliness, and water savings with minimal noise. Featuring a **rimless** design and a **360° spiral water flow**, it ensures complete and even cleaning, reduces water consumption, and prevents unwanted splashes.

The ***Rimless Vortex*** technology delivers a targeted, efficient, and surprisingly quiet flush. This performance can be enhanced with our comfort solutions, such as the **sound insulation mat**, developed to further reduce noise levels, and the **ultra-silent filling valves**, certified according to **EN 14124 Class I,** the highest level of acoustic performance. The result is an experience where true comfort lies in the details you don't hear.

360° SPIRAL FLOW

With a rimless design and 360° spiral water flow, it ensures complete and uniform cleaning. Prevents splashes and makes maintenance easier.



SILENT FLUSH

Noise, both airborne and structure-borne, is minimized to ensure acoustic comfort. Ideal for hotels and residential spaces.

WATER SAVINGS

With flush volumes of just 3/4.5 liters, adjustable to 2/4 liters, the Rimless Vortex technology promotes efficient water use, ensuring hygiene without waste.

SANITARY WARE

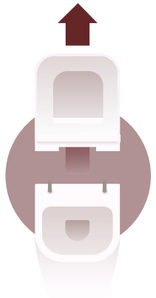
Sanitary ware has been used in bathrooms for centuries, and for good reason. Made from natural raw materials, it stands out for its comfort, hygiene, and safety qualities: the glazed surface makes cleaning easier, prevents moisture absorption, and inhibits the proliferation of fungi and bacteria.

SOFT-CLOSE

With soft-close toilet seats, just a gentle touch is enough for the lid to lower slowly and silently. This convenient technology not only prevents possible accidents with children (such as trapped fingers), but also avoids noise when the seat closes.

TAKE-OFF SYSTEM

The ingenious take-off technology allows the toilet seat to be easily removed for deep cleaning. This hygienic mechanism provides a button that makes it simple to remove the seat, clean hard-to-reach areas, and place it it without difficulty. **This system is available on RUBY soft-close seats.**



WATER SAVINGS

Conventional toilets account for more than 30% of domestic water consumption, as they use the full tank even when not necessary. To reduce this waste, RUBY cisterns feature a dual-flush system – 3/4.5 L or 2/4 L – allowing only part of the tank's water to be used when needed, without unnecessary consumption.

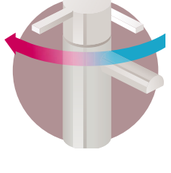
COLD START

Cold start technology allows effortless energy savings: whenever the faucet is opened in its central position, only cold water is activated. To turn on the hot water, the handle must be turned to the left, and only then will the heating system be engaged. This feature prevents hot water from flowing unnecessarily through the pipes, saving energy, reducing CO_2 emissions, and minimizing both environmental impact and costs.



ECOLOGICAL AERATOR

Air is abundant, but water is precious: discover the technology that makes the most of water while reducing consumption. Ecological aerators are components integrated into the faucet spout that enrich the water with air. The result is a fuller, more precise, and softer water flow, where each drop feels larger, lighter, and more voluminous. The outcome is effortless water savings and a more comfortable use, without splashes.
